

Bright Tv Analysis Plan

1.. What are the business Questions?

- Who are BrightTV's customers?
- Which age groups use the platform the most?
- Which provinces have the highest number of users?
- What is the gender distribution of users?

1.1 Viewing Behaviour

- Which genres are watched the most?
- What time of day do customers watch content?
- Which days have the highest viewership?
- How long do users spend watching content.

1.2 Customers Engagement

- Which gender watches which channel most?
- Which users are the most active?
- What factors appear to influence viewing behaviour?

2.. Data source

1.1. User profile Dataset

- User ID
- Age
- Gender
- Province
- Subscription Type
- Customer information

1.2. viewership Dataset

- Watch Date
- Watch Time
- Genre
- Device
- Viewing Duration
- Content watched

3.. Data Preparation

Before analysing the data, the following steps were completed:

- Removed duplicate records.
- Handled missing and inconsistent values.
- Standardised text values (e.g., Gender, Province).
- Created age groups.
- Created time-of-day categories.
- Formatted dates and times.
- Joined the datasets for analysis.

4.. Tools that I used for this case study.

- Data Bricks
- Data Studio
- Power BI
- PowerPoint
- Lovable
- Excel

5.. Key Insights & Recommendations on my case study

- Personalise content recommendations.
- Promote Premium subscriptions.
- Release content during peak viewing hours.
- Invest in popular genres.
- Target marketing campaigns to underperforming regions.
- Improve engagement through personalised customer experiences.
